## 2 Introduction

---

Intertek has conducted testing for Mr. Jim Wadaga, on Dal-Seal TS and Chloraloy chlorinated polyethylene membrane, to evaluate for Water Vapour Transmission. Testing was conducted in accordance with standard methods of ASTM E 96/E 96M-05, Water Vapour Transmission as per Procedure A, Desiccant Method. This evaluation began on March 24, 2011 and was completed on April 18, 2011.

## 3 Test Specimen

---

### 3.1. SPECIMEN SELECTION

One rolled specimen of each membrane type, 5 feet wide was submitted for testing. Specimens were submitted to Intertek directly from the client. Specimens were not independently selected for testing. Specimens were received at the Evaluation Center on September 21, 2010.

### 3.2. SPECIMEN AND ASSEMBLY DESCRIPTION

The Dal-Seal TS membranes are designed to provide thin bed waterproofing, crack isolation of thin-set tile, and may be used to bridge control joints. The membranes are made from Chlorinated Polyethylene (CPE) with non-woven fiber laminated on both sides.

The Chloraloy membranes are designed to provide waterproofing under a full mortar bed for installation of tiles or stones. The membranes are made from Chlorinated Polyethylene (CPE) and are gray in colour.

## **4 Testing and Evaluation Methods**

---

### **4.1. SPECIMEN PREPARATION**

All specimens were cut to the required dimensions at Intertek Testing Services laboratory according to ASTM E 96/E 96M-05.

### **4.2. CONDITIONING**

Prior to testing the specimens were conditioned at  $23 \pm 2^{\circ}\text{C}$  and  $50 \pm 5\%$  relative humidity for a minimum of 24 hours.

### 4.3. TEST PROCEDURES

#### 4.3.1. TEST STANDARD

Water Vapor Transmission (WVT) was evaluated in accordance with ASTM E96-05. Four specimens of the Dal-Seal TS membrane, measuring 133.54 mm (5.26 in.) in diameter were cut from the flattest section of the specimen and had an average thickness of 1.02 mm (0.04 in.) thick. Four specimens of the Chloraloy membrane, measuring 133.54 mm (5.26 in.) in diameter were cut from the flattest section of the specimen and had an average thickness of 1.15 mm (0.05 in.) thick. Each specimen was weighed and measured for thickness prior to being sealed to the dish.

The dish, made from stainless steel was cleaned and free of moisture prior to filling with desiccant. The desiccant was dried at a temperature of 200°C (400°F) for a period of 24 hours, and allowed to cool in a moisture free environment until it reached room temperature. The dishes were then filled with desiccant with 6 mm (1/4 in.) of space from the specimen. The specimen was then placed on to the dish and sealed around the perimeter with melted beeswax. The test specimens were conditioned at 23 ± 2°C (73 ± 5°F) and 50 ± 5% relative humidity and periodic weight measurements taken every three or four days. Measurements continued until the sample's rate of weight change was noted to stabilize.

The water vapour permeance was calculated as follows:

Water Vapour Permeance (inch pound units):

$$\text{WVP} = G/tA = (G/t)/A$$

Where G = weight change, grains (from the straight line)  
 t = time during which G occurred, h  
 G/t = slope of the straight line, grains/h  
 A = test area (cup mouth area), ft<sup>2</sup>  
 WVP = rate of water vapour transmission, grains/h·ft<sup>2</sup>

Permeance:

$$\text{Permeance} = \text{WVP}/\Delta p = \text{WVT}/S (R1-R2)$$

Where:  $\Delta p$  = vapour pressure difference, in. Hg  
 S = saturation vapour pressure at test temperature, in. Hg  
 R1 = relative humidity at the source expressed as a fraction (test chamber)  
 R2 = relative humidity at the vapour sink expressed as a fraction

$$\text{Permeability} = \text{Permeance} \times \text{Thickness}$$

## 5 Testing and Evaluation Results

### 5.1. RESULTS AND OBSERVATIONS

The sample test results are shown in Table 1 below. A full set of test data is included in Appendix A.

<b>Table 1. Test Results of Dal-Seal TS Chlorinated Polyethylene Membrane</b>				
<b>Property</b>	<b>Specimen 1</b>	<b>Specimen 2</b>	<b>Specimen 3</b>	<b>Average</b>
Water Vapour Permeance at thickness tested, perms (ng/Pa·s·m <sup>2</sup> )	0.14 (7.90)	0.17 (9.47)	0.19 (10.7)	0.16 (9.36)
Water Vapour Permeability, perm inch (ng/Pa·s·m)	0.0056 (0.0082)	0.0064 (0.0093)	0.0078 (0.0113)	0.0066 (0.0096)

The sample test results are shown in Table 2 below. A full set of test data is included in Appendix B.

<b>Table 2. Test Results of Chloraloy Chlorinated Polyethylene Membrane</b>				
<b>Property</b>	<b>Specimen 1</b>	<b>Specimen 2</b>	<b>Specimen 3</b>	<b>Average</b>
Water Vapour Permeance at thickness tested, perms (ng/Pa·s·m <sup>2</sup> )	0.06 (3.65)	0.07 (3.76)	0.07 (4.06)	0.07 (3.83)
Water Vapour Permeability, perm inch (ng/Pa·s·m)	0.0030 (0.0044)	0.0029 (0.0042)	0.0031 (0.0045)	0.0030 (0.0044)

## 6 Conclusion

---

The Dal-Seal TS and Chloraloy chlorinated polyethylene membranes reported herein have been tested in accordance with E 96/E 96M-05, Water Vapour Transmission, Procedure A, Desiccant Method.

The conclusions of this test report may not be used as part of the requirements for Intertek product certification. Authority to Mark must be issued for a product to become certified.

Vapor Resistance of Still Air ( $\text{m}^2\cdot\text{s}\cdot\text{Pa}/\text{kg}$ )	3.11E+07	3.11E+07	3.11E+07
Surface Resistances ( $\text{m}^2\cdot\text{s}\cdot\text{Pa}/\text{kg}$ )	4.00E+07	4.00E+07	4.00E+07
Total Still Air and Specimen Surface ( $\text{m}^2\cdot\text{s}\cdot\text{Pa}/\text{kg}$ )	7.11E+07	7.11E+07	7.11E+07
Four Times Test Area Divided By Perimeter (m)	9.67E-02	9.67E-02	9.67E-02
Excess Water Transmission Due to Mask (%)	1.09	1.03	1.01
Excess Water Permeance Due to Mask ( $\text{ng}/\text{Pa}\cdot\text{s}\cdot\text{m}^2$ )	4.03E-02	3.91E-02	4.14E-02
Mask-corrected Water Permeance ( $\text{ng}/\text{Pa}\cdot\text{s}\cdot\text{m}^2$ )	3.65E+00	3.76E+00	4.06E+00
Water Vapour Transmission ( $\text{g}/\text{hour}\cdot\text{m}^2$ )	1.88E-02	1.93E-02	2.09E-02
Water Vapour Permeance ( $\text{ng}/\text{Pa}\cdot\text{s}\cdot\text{m}^2$ )	3.65	3.76	4.06
Water Vapour Permeance (perms)	0.06	0.07	0.07
Water Vapour Permeability ( $\text{ng}/\text{Pa}\cdot\text{s}\cdot\text{m}$ )	0.0044	0.0042	0.0045
Water Vapour Permeability (Perm inch)	0.0030	0.0029	0.0031

<sup>1</sup>Estimated by the Clausius-Clapeyron equation

Test Result Summary	Metric units	Imperial Units
Water Vapor Transmission	0.02 $\text{g}/\text{hr}\cdot\text{m}^2$	0.03 $\text{grns}/\text{hr}\cdot\text{ft}^2$
	0.47 $\text{g}/\text{day}\cdot\text{m}^2$	0.67 $\text{grns}/\text{day}\cdot\text{ft}^2$
Water Vapor Permeance	3.83 $\text{ng}/\text{Pa}\cdot\text{s}\cdot\text{m}^2$	0.07 perms
	0.0002 per 25 mm	0.0030 per in.
Water Vapor Permeability	0.0044 $\text{ng}/\text{Pa}\cdot\text{s}\cdot\text{m}$	0.0030 Perm inch
