Waterproofing Sealant and Seamer

www.noblecompany.com

## NobleSealant 150

*Waterproofing sealant and seamer used to seam NobleSeal® sheet membranes together and seal penetrations of the membrane. Provides a seal between the waterproof sheet membrane and the clamping ring drain. Used as a concealed terminal edge and flashing sealant. Adheres preformed corners to the waterproofing membrane or studs. Spot bonds sheets to vertical or horizontal surfaces.*

- Ready to use
- Synthetic co-polymer rubber - high solids
- Unaffected by exposure to water after cured
- Adheres to wood, metal, concrete, glass, plastic, & rubber
- Broad temperature use range (-65°F to 122°F)
- 3-Year shelf life at room temperature if unopened
- Available in 10.3 oz. tubes
- Coverage: Approximately 40 linear feet/tube (3/16" bead)

**Note:** Surface must be clean, dry and free of dust, oil, and grease. Use a heavy-duty commercial grade caulking gun.

**Caution:** Contains propylacetate. Store below 85°F. Avoid prolonged contact with skin or inhalation of vapors. Use with adequate ventilation.

**Do not use on XPS or EPS products as material may be affected by NobleSealant 150.**

**PENETRATIONS:** Patch penetration with a piece of membrane approximately 2" larger on all sides of the penetration. Seal patch over penetration with a 3/16" bead of NobleSealant 150. Use enough NobleSealant 150 to insure a water-tight seal.

**CURING:** Times for curing can vary from 30 minutes to 24 hours depending on a variety of conditions (e.g. temperature, humidity, air flow, etc.) Allowing seams to cure overnight is recommended.

**SEAMING:** Overlap sheets approximately 2". (Note: Polyester fabric does not need to be removed.) Apply a 3/16" bead of NobleSealant 150. (Note: Beads must be parallel and continuous without voids or skips.) To seal, press overlapped sheets together and use a trowel or hand roller to flatten bead.
